

Claims

1. A polishing implement for polishing a shoe or the like, comprising:
 - a structure to be handheld, provided with an absorbing fiber layer for forming a first polishing layer; and
 - a sachet provided on or to be provided on the structure for
- 5 containing the polishing product
characterized in that
 - the sachet comprises a fiber layer impregnated with polishing product, screened off, in closed condition, by a protective layer, while in opened condition the impregnated fiber layer forms a second polishing layer for
- 10 applying polishing product to the shoe.
2. A polishing implement according to claim 1, characterized in that the sachet is removable and covers the first polishing layer at least partly, so that only after removal of the second polishing layer the first polishing layer is completely revealed.
- 15 3. A polishing implement according to claim 2, characterized in that the polishing implement comprises an impermeable layer to which the sachet is attached, which impermeable layer has a surface greater than the sachet.
4. A polishing implement according to at least one of the preceding claims, characterized in that in opened condition, the sachet reaches beyond an
- 20 edge of the structure.
5. A polishing implement according to at least one of the preceding claims, wherein the sachet comprises a protective layer and, attached thereto, a fiber layer saturated with polishing product, while in closed condition, the protective layer is folded over and is sealed off along the edges, while the
- 25 sachet is provided on the structure on one side of the fold.
6. A polishing implement according to claim 5, wherein the sachet is attached to a bottom side of the structure and, in use, in opened condition,

reaches beyond the edge and, folded back, can be attached to a top side of the structure.

7. A polishing implement according to at least one of the preceding claims, characterized in that the structure comprises a glove.

5 8. A polishing implement according to at least one of the preceding claims, characterized in that the structure comprises a handle and a relatively flat part forming a base for the sachet.

9. A sachet for a polishing implement according to at least one of the preceding claims, characterized in that the sachet comprises a fiber layer
10 impregnated with polishing product and, in closed condition, screened off by a protective layer, while in opened condition, the impregnated fiber layer forms a second polishing layer for applying polishing product to the shoe.
